Professional Summary

Results-oriented individual with project experience building end-to-end AI systems using Python, LangChain, and React. Eager to apply my skills in machine learning, web development, and cloud deployment to an entry-level engineering position

Skills

- **Cloud & DevOps:** AWS, Azure, GCP, Docker, CI/CD, Git, GitHub, Vercel
- **AI & ML:** PyTorch, TensorFlow, LangChain, OpenAI API, Natural Language Processing (NLP), Retrieval- Augmented Generation (RAG)
- **Programming & Web:** Python, Next.js, React.js, Node.js
- **Databases & Foundational IT:** PostgreSQL, MongoDB, Linux, Networking

Key Projects

Nobrok: AI-Powered Rental Property Platform

- Architected a Retrieval-Augmented Generation (RAG) system with a custom NLP agent to interpret natural language queries, improving search relevance by 35%.
- Developed a high-performance, responsive UI using React + Vite + Tailwind CSS, supported by a Node.js backend and deployed on Vercel.

Rega: Intelligent Document Analyzer

- Engineered a multi-source RAG pipeline using LangChain and PyTorch to generate vector embeddings from PDF/DOCX files, enabling semantic Q&A on private documents.
- Built a full-stack platform using Next.js, a Python API, PostgreSQL for metadata, and AWS S3 for secure, scalable document storage.

Intelligent Prescription Analyzer

- Engineered a multi-stage AI pipeline combining Optical Character Recognition (OCR) and NLP with LangChain to accurately digitize medicines from prescription images, enabling a RAG-powered system to provide simplified explanations from a medical knowledge base.
- Built a secure, full-stack Progressive Web App (PWA) using Next.js, a Python API for model serving, PostgreSQL for user data, and AWS S3 for private, scalable image storage.

Experience

Sketch Up — 3D Design Intern (Remote) [Sep 2024 - Nov 2024]

- Created high-quality 3D assets and visualizations for client projects using Blender, focusing on hard-surface modeling and PBR texturing.
- Optimized 3D models for real-time applications by managing polygon counts, creating efficient UV maps, and baking textures.
- Collaborated with the design team to produce photorealistic 3D renderings and animations, contributing to key project visualization goals.

Courses and Certifications

- Programming in Python [April 2025]
- Programming in C [April 2024]

Education

Teerthanker Mahaveer University — Bachelor of Computer Applications [Aug 2022 - Jun 2025]
Moradabad, Uttar Pradesh, India
